MINEKPI's

Data Scientist Jr

León, Guanajuato. México.

September 2022 - November 2023

As a junior data scientist, I have had the opportunity to work on various projects and gain experience in different areas of data science. During my time in this position, I have collaborated in data cleaning and preparation, as well as exploratory analysis and information visualization. In addition, I have participated in the construction and evaluation of machine learning prediction and classification models and have contributed in the implementation of solutions for process optimization. Through these experiences, I have developed skills in programming in languages such as Python and R, as well as in the management of data science tools and libraries. I have also worked in cross-functional teams, which has allowed me to improve my communication and collaboration skills. I also had participation as a web developer to create the interface of the solution, using technologies like HTML, CSS, Javascript for the front-end as well as Java and Springboot in the back-end.
